

## Identifying your Gimbel/Mendez Guide Ring Type

---

There are three handle attachment locations for the *Gimbel/Mendez* ring: 90°, 0/180°, or 135°. This document serves as a guide to identify which version you have. Each ring also comes with a choice of the *Bores* handle or *Thornton* handle as shown on **page 4**.

**Gimbel/Mendez 90°, Bores Handle** - The 90° version has the 90° marking directly across from where the handle is attached to the ring. See red arrows below. Top red arrow points to 90° marking, bottom red arrow points to handle location.

**Gimbel/Mendez 0/180°, Bores Handle** - The 0/180° version has the 0/180° marking directly across from where the handle is attached to the ring. See blue arrows below. Top blue arrow points to 0/180° marking, bottom blue arrow points to handle location.

**Gimbel/Mendez Koch 135°, Bores Handle** - The Koch version has the 135° marking directly across from where the handle is attached to the ring. See green arrows below. Top green arrow points to 135° marking, bottom green arrow points to handle location.

Every *Gimbel/Mendez* ring comes with two different handles as shown below (older handles were gray in color):

## BORES

## THORNTON
